The present sequence is a cDNA encoding novel human protein (NHP) known as human kinase. The human kinases share structural similarity with cas human kinases. The human kinases of animal kinases.

C animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP concleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene Sequence 945 BP; 323 A; 165 C; 202 G; 255 T; 0 U; 0 Other; X888888888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, lymphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis), a growth and developmental disorder (e.g. bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ding

cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease). FKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. FKIN is useful for creating knockin humanised animals or transgenic contains to model human diseases, in somatic or general or creating chockin humanised animals or transgenic generate a transcript image of a tissue or cell type, for detecting contains to model human diseases, in somatic or generate a transcript image of a tissue or cell type, for detecting cetc., among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. PKIN is useful cetchnologies, in PCR technologies, in dipstick, pin, multiformat enzyme linked immunosorbent (ELISA)-like assays and in microarrays utilisaing these tresent sequence is human PKIN-10 cDNA

This invention relates to the cDNA and protein sequences of fifty six polymucleotides for diagnostics and therapeutics (DITHP). The human DITHP polymucleotides and polypeptides are useful for diagnosing, preventing or treating diseases associated with, as well as effects of exogenous compounds, on the expression of human molecules, such as cell compounds, primary thrombocytopenia), autoimmune-inflammatory diseases (e.g. anaemia, asthma, autoimmune thyroiditis, Crohn's disease, diabetes callitus, glomerulonephritis, gout, multiple scalerosis, rheumatory diseases callitus, glomerulonephritis, gout, multiple scalerosis, rheumatorid arthritis, uveitis, acquired immunodeficiency disease; AIDS; allergies; neurological disorders (e.g. stroke, Alzheimer's disease; Alms; allergies; carthritis, treatedation, parkinson's disease, epilepsy), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. infertility, endometriosis), reproductive (e.g. infertility, endometriosis), reproductive (e.g. infertility, endometriosis), reproductive (e.g. infertility, endometriosis), reproductive (e.g. infertility, endometriosis), connective tissue disorders (e.g. osteoporosis, Reiter's syndrome), or infections (e.g. bacterial), viral, fungal, parasitic, protozoal). The DITHP sequences may be used to converted hybridisation probes useful in chromosomal mapping or naturally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              occurring genomic sequences. They are also useful in designing probes useful in diagnostic assays. The polynucleotides are useful as molecular weight markers, or as antigen to elicit an immune response. The present
New human diagnostic and therapeutic (DITHP) polynucleotides and polypeptides, useful for diagnosing, preventing or treating diseases, e.g. cancer, AIDS, Parkinson's disease, or autoimmune/inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence represents a human diagnostics and therapeutics (DITHP) cDNA

novel Nucleic acids encoding human kinase polypeptides, useful for preventing diagnosing and/or treating e.g. cancer, immune, cardiovascular and neuronal-associated diseases, and microbial infections. AASO6701-AASO6757 encode for novel human protein kinases #1-57. The protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with 3xample 1; Fig 1; 433pp; English. P-PSDB; AAU03525.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atheroscalerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. theumatoid arthritis), neurological barkinson's disease), inflammatory disorders (e.g. asthma), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility).

Additionally, polynucleotides encoding protein kinases may be used for polypeptides may be used as antigens in diagnostic assays. The protein kinase against the protein kinase and in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    486

906 781 GAAGACATGGAAACTCTTGAGGAAAGTTCTCAGATGTTCATCCTGTGGCTCTGAACTTC 840 ATGAAGGGGTGTCTGAAGATGAATCCAGATGACAGATTAACCTGTTCCCAACTCCTGGAG 846 The present sequence is a cDNA encoding novel human protein (NHP) known as human kinases. The human kinases share structural similarity with than animal kinases. The human kinases or threonine protein kinases. The diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of MHP in the body. The NHP in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for medical disorders. MHP oligonucleotides are useful for treating mental, biological or medical disorders. MHP oligonucleotides are used as probes. The labelled PNPMP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations 847 AGCTCCTACTTTGATTCTTTTCAAGAGGCCCAAATTAAAAGAAAAGGACGTAATGAAGGA 901 AGCTCCTACTITIGATTCTTTTCAAGAGGCCCAAATTAAAAGAAAGGAGGTAGTAGAAGGA /product= "Human kinase #5" /note= "The coding region does not include stop codon" New isolated human kinase polynuclectide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases. within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically enginer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                      120

the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynuclectides, polypeptides, agonists and antagonists may be useful for diagnosing, treating or preventing disorders such as cardiovascular diseases, immune system disorders, neurological disorders affecting growth and development, cell proliferative disorders and viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the molecules of the invention may be useful for creating transgenic animals to model human disease and during gene therapy. The current sequence is that of a human or human and parameters.

Query Match 셤 à d ò g ò 셤

The present sequence encodes a human kinase and phosphatase (KPP)

protein. KPP sequences have cardiovascular, antiarteriosclerctic,

thycotensive, wasotropic, antiinflammatory, antianginal, anti-HIV,

cantiallergic, antiasthmatic, immunosuppressive, antithyroid,

dermatological, antidiabetic, immunosuppressive, antithyroid,

cantificumatic, antidiabetic, immunosuppressive, antithyroid,

cantificumatic, antidiabetic, immunosuppressive, antithyroid,

cantificumatic, antiparkinsonian, nootrobic, anticonvulsant, heperotropic,

cantificumatic, antiparkinsonian, nootrobic, antilipaemic, antiparasitic,

cantificumatic, antibacterial, virucide, protozoacide and fungicide

phosphatase modulators. KPP proteins, polymucleotides, agonists and

associated with aberrant expression of KPP, such as stations and

associated with aberrant expression of KPP, such as cardiovascular

cantagonists can be used for diagnosing, treating or preventing disorders

diseases (e.g. atherosclerosis, hypertension, vasculitis, angina pectoris

consective heart failure), immune system disorders (e.g. AlDS,

allergies, asthma, autoimmune thyroiditis, contact dermatitis, contact

consective heart failure), immune system disorders (e.g. AlDS,

disease, disbaces mellitus, glomerulonephritis, Goodpasture's syndrome,

cout, irritable bowel syndrome, or uveitis, glomerulonephritis,

disease, parkinson's disease, Hultington's disease, dementia or

costeoporosis, pancreatitis, neurological disorders (e.g. Alzheimer's

cycleptroblesterolamia, hyperilipidaemia or cancer), or viral, bacterial,

compounds on the expression of midiale acids and kinases and

compounds on the expression of midiale acids and kinases and

compounds on the expression of midiale acids and kinases and

compounds on the expression of midiale acids and kinases and

compounds on the expression of polymucleotides are also useful in assessing the effects of exogenous

compounds on the expression of midiale acids and kinases and

compounds on the expression of polymucleotides encoding KP 5; SEQ ID NO 94; 330pp; English Claim

                                                                                                                                                                                                                                                   ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated 14257 polypeptide and nucleic acid encoding it. The 14257 protein is a protein kinase that acts as a modulating agent in regularing a variety of callular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as; cytostatic; osteopathic; hepatotropic, antidiabetic, neuroprotective, antiarthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; antiparthritic; immunoaughensive; ansotropic; antiarthritic; virucide; antiparthritic; metabolic; immunomodulator and analgesic. The protein of the invention may act as a novel diagnostic target or therapeutic agent invention may act as a novel diagnostic target or therapeutic agent controlling certain disorders, for example kinase-associated or other lasorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disease. Other disorders include bone metabolism disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   osteoporosis, disorders of the immune system, e.g. inflammatory, diabetes mellitus, osteoarthritis and asthma. Proteins of the invention any also be of use as therapeutic agents in cardiovascular disorders such as hypertension and coronary artery disease, and some endothelial cell disorders, including psoriasis. complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase expression and activity. Diseases related to down regulate kinase activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune immune disorders, camplications of organ transplantation, myocardial infarction, stress related disorders, chronic inflammatory bowel disease, chornic inflammatory pelvic disease, multiple sclerosis, aschma, osteoarthritis, disorders in thinitis, autoimmunity, diabetes, cancers and reproductive
                                                                                                                                                                                                                                                                                                                                                                                      68.08;

The invention relates to a compound comprising a sequence comprising 8-80 (MAP/microtubule affinity-regulating kinase 3), that specifically hybridises with the mucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting suspected of having a disease or condition associated with MARK3 and suspected of having a disease or condition associated with MARK3 and useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated cDNA included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300
                                                                                                                                                                                                                                                                                                                                                         New antisense compound targeted to a nucleic acid molecule encoding microtubule-affinity-regulating kinases (MARK3), useful for modulating expression of MARK3 or for treating cancer or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    285 AAATGGAGTTGCTGATGGAGTGATCAAAAGCGTATTATGGCAAACACTTCAAGCTCTTAA

The nucleic acids and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardicovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and neurodegenerative diseases and/or cancers. The nucleic acids and assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase expression and activity. Diseases related to kinase expression and activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a compound comprising a sequence comprising 8-80 (MAP/microtubule affinity-regulating kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a the expression of MARK3 in cells or tissues, treating an antimal having suspected of having a disease or condition associated with MARK3 and suspected of having a disease or condition associated with MARK3 and secreening for an antisense compound. The antisense oligonucleotide is disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer, a disease. The present sequence is a MARK3 associated conversional and neurodegenerative diseases e.g. included in the figures but not mentioned anywhere else in the

TY POPULCHECKIGE, MEECHI for diagnosing, treating or preventing cancers or hepatitis.

TY Population of sarcoma), anemia, Crohn's disease, AIDS, Osteoporosis or hepatitis.

Claim 1; SEQ ID NO 240; 339pp + Sequence Listing; English.

XX This invention describes a novel disease detection and treatment molecule or hepatitis.

CC and any opeptied (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-inflammatory, immunosuppressive, osteopathic, antipooriatic and hepatoropic activity. The polymoclectides are diseases or conditions. These polypeptides or the invention can be used for gene therapy, cortical array useful for diagnosing, treating or preventing cell continual. Jymphoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma, melanoma,

                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

THIS PAGE BLANK (USPTO)

```
The present sequence is novel human protein (NHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in adjagnostic assays, for the identification of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical
                                                                                                                                                                                                                                                                                             Human los

probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression

```
The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., Deukaemia, Immunoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's cardiovascular disorder (e.g., atherost), angerlonental disorder (e.g. bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease). PKIN is useful in a number of chug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in sometic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting confiferences in the chromosomal location due to translocation, inversion, croposes for mapping naturally occurring genomic sequences. PKIN is useful crechnologies, in dipstick, pin, multiformat enzyme clinked immunosorbent (ELISA)-like assays and in microarrays utilising the core present sequence is human PKIN-10
                                                                                                                                                                                                                                                                                                                                                            New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.
                                                                                                                                                            Thornton M, Yue H, Khan FA, Gururajan R, Hafalia AJA, Walia NK; Patterson C, Ramkumar J, Gandhi AR, Policky JL, Baughn MR; Tribouley CM, Bandman O, Nguyen DB, Lu Y, Burford N, Lal P, Ding Yao MG, Elliott VS, Recipon SA, Kearney L, Lu DAM, Greenwald SR; Tang YT, Xu Y, Walsh RT, Gietzen KJ, Yang J, Hillman JL:

```
The present sequence is novel human protein (NHP) known as human kinase.

The human kinases share structural similarity with animal kinases, more particularly series or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations of fective in the treatment of Symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying colymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Zambrowicz B;

The present sequence is novel human protein (NHP) known as human kinase.

The human kinases share structural similarity with animal kinases, more particularly serine or threading by the particularly serine or threading by the particularly serine or the construction by the construction of mutant human kinases. Human kinase cDNA is useful for the detection of mutant human kinases. Human kinase cDNA is useful for the detection of symptomatic or phenotypic manifestations of fetctive in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in agencies that can products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP compounds that as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP

AAU03501-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine thrace (PTK and STK) families. The polymucleotides control than the protein kinases and the polymptides may be used in the protein kinases and the polymptides may be used in the prevention, diagnosis and treatment of diseases associated with cancers (especially cancers of haematopicitic origin), cardiovascular cancers (especially cancers of haematopicitic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disease (e.g. schizophrenia), neurodegenerative disorders (e.g. diabetes), parkinson's disease), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility).

Additionally, polymucleotides encoding protein kinases may be used for gene therapy and as DNA probes in disquestic assays. The protein kinase polypeptides may be used as antiqens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

The present sequence inverting in the present sequence in the present sequence in the present sequence in the present sequence in the present sequence in the present sequence in the present sequence in the detection of mutant human kinases. Human kinases, more disease, and also as a therapeutic. It is useful for screening drugs of disease, and also as a therapeutic. It is useful for screening drugs of perturbing the normal function of NHP in the body. The NHP mucleotide sequences are useful for generation of antibodies, as reagents in disponsite assays, for the identification of other cellular gene products celated to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disponders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying colymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in disponsities and pharmacogenomics. Nucleotide construct encoding NHP to the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                  sequence is novel human protein (NHP) known as human kinase
                                                                                                                                                                                                              New isolated human kinase polymucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases.

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, proteins, rhinitis, autoimmunity, diabetes, cancers and reproductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ñ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    46 KIALREIRMLKOLKHPNIVNLIEVFRKKRKMHLVFEYCDHTLLNELERNPNGVADGVIKS 105

The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regularing kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the

                     The invention relates to an isolated polynucleotide (I) comprising one of administering to a manmalian subject a composition comprising deministering to a manmalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP631053) or an antibody (III) to (III).

(I), (II) and (III) are useful for diagnostic evaluation of disorders.

(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                              Human; vulnerary; dermatological; neuroprotective; nootropic; cancer; antiparkinsonian; immunostimulant; cytostatic; immunosuppressive; antidiabetic; antiallergic; gene therapy; wound healing; tissue repair; burn; central nervous system disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; immune disorder; autoimmune disorder; multiple sclerosis; diabetes; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide and polypeptides, useful for treatment and diagnosis of Alzheimer's, Parkhison's, Huntington's, amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.

a mammalian cell comprising contacting the cell with an agent that specifically binds a CDKL1 polypeptide or nucleic acid; and (3) a method for diagnosing a disease in a patient. The CDKL1 polypeptide or nucleic acid is useful for modulating branching morphogenesis in a mammalian cell. It is also useful for diagnosing a disease, e.g. angiogenic, apoptocic or proliferation disorder in a patient. The present sequence represents human CDKL1, which is used in the exemplification of the present invention. The human CDKL1 gene is located on chromosome 14, more

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies antagonists may also be used to down regulate kinase activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, allowed the productive discase, renal failure, candictive disease, multiple sclerosis, asthma, osteoarthritis, allowed asthmistis, rhinitis, autoimmunity, diabetes, cancers and reproductive

```
The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/Microtubule affinity-regulating kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          215

The 14257 protein is a protein kinase that acts as a modulating agent in regularing a variety of cellular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as; cytostatic; osteopathic; hepatotropic; antidiabetic; neuroprotective; antiarthritic; hepatotropic; antidiabetic; natialleragic; antiarthritic; antipsoriatic; ophthalmological; antialleragic; antiarthritic; antiatherosclerotic; hypotensive; vasotropic; antiarthritic; canciented as nonectic; metabolic; immunomodulator and analgesic. The protein of the invention may act as a novel diagnostic target or therapeutic agent controlling certain disorders, for example kinase-associated or other controlling certain disorders. These may include cellular proliferative disorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disease. Other disorders include bone metabolism disorders such as
                                                                                                                                                                                                                                                                                                                                      /note= "kinase transferase protein serine/threonine-
protein ATP-binding II phosphorylation casein alpha chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     osteoporosis, disorders of the immune system, e.g. inflammatory, diabetes mellitus, osteoarthritis and asthma. Proteins of the invention any also be of use as therapeutic agents in cardiovascular disorders such as hypertension and coronary artery disease, and some endothelial cell disorders, including psoriasis. The current sequence represents a human kinase 14257 amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New 14257 polypeptides (protein kinases), useful as diagnostic target and therapeutic agents for controlling cellular proliferative and/or differentiative disorder, bone disorders, immune disorders and

                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABI16176-ABI30511), expressed DNA sequences (ABI01840-ABI16175) and the encoded proteins (ABB57377-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61.8%; Score 1027.5; DB 4; Length 392;

The present sequence represents a learning-induced kinase, designated KKIAMRE kinase, which is isolated from rabbit brain tissue. KKIAMRE kinase is a cdc2-related kinase. The KKIAMRE kinase polymodieotides can be used to express recombinant protein for analysis, characterisation or therapeutic use, as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags, to compare endogenous DNA sequences in patients to identify potential genetic disorders, as probes to hybridise and discover novel related sequences, as a source of PCR primers, and as Novel learning induced kinase polynucleotides and polypeptides, useful for the analysis of learning and memory, and for gene therapy. Claim 1; Fig 4; 64pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 11, Application US/10174794

Patent No. 6664086

GENERAL INPORMATION:
TITLE OF INVENTION: CDNA, GENOMIC, AND PREDICTED PROTEIN
TITLE OF INVENTION: EDGURNCES OF LEARNING-INDUCED KINASES
TITLE OF INVENTION: SEQUENCES OF LEARNING-INDUCED KINASES
FILE REFERENCE: 13761-707
CURRENT FILING DATE: 2002-06-18
PRIOR PAPLICATION NUMBER: US/10/174,794
PRIOR APPLICATION NUMBER: US/09/411,628
PRIOR PILING DATE: 1999-10-01
PRIOR APPLICATION NUMBER: US 60/102,906

PRIOR PLING DATE: 1999-10-01

PRIOR PLING DATE: 1999-10-01

PRIOR SEQ ID NOS: 16

NUMBER OF SEQ ID NOS: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               41; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 7552, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FESTESEQ for Windows Version 4.0
